No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB DB

INCLUDES ASPARAGINE, ASPARTATE, GLUTAMINE, AND HISTIDINE.

-I- FUNCTION: CHEMOTACTIC-SIGNAL TRANSDUCERS RESPOND TO CHANGES IN THE CONCENTRATION OF ATTRACTANTS AND REPELLENTS IN THE ENVIRONMENT, TRANSDUCE A SIGNAL FROM THE OUTSIDE TO THE INSIDE OF THE CELL, AND PACILITATE SENSORY ADAPTATION THROUGH THE VARIATION OF THE LEVEL OF METHYLATION. ALL AMINO ACIDS SERVE AS ATTRACTANTS IN B. SUBTILIS, THEY APPEAR TO CAUSE AN INCREASE IN THE TURNOVER METHYL GROUPS, LEADING TO METHYLATION OF AN UNIDENTIFIED ACCEPTOR, WHILE REPELLENTS HAVE BEEN SHOWN TO CAUSE A DECREASE IN METHYL GROUP TURNOVER. THE METHYL GROUPS ARE ADDED BY A METHYLESTERASE.

-I- SIMILARITY: Contains 1 methyl-accepting transducer domain.

PTM: SULFATED (BY SIMILARITY).

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

CAUTION: Was originally (Ref.1) thought to be a receptor for neuropeptide Y type 3 (NPY3-R).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      THE C-X-C CHEMOKINE SDF-1. TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL.

INVOLVED IN HAEMATOPOIESIS AND IN CARDIAC VENTRICULAR SEPTUM FORMATION. PLAYS ALSO AN ESSENTIAL ROLE IN VASCULARIZATION OF THE CASTROINTESTINAL TRACT, PROBABLY BY REGULATING VASCULAR BRANCHING AND/OR REMODELLING PROCESSES IN ENDOTHELIAL CELLS. COULD BE INVOLVED IN CEREBELIAR DEVELOPMENT. IN THE CNS, COULD MEDIATE INTEPOCAMPAL-NEURON SURVIVAL. ACTS AS A PRIMARY RECEPTOR FOR SOME HIPPOCAMPAL-NEURON SURVIVAL. Name=2; Synonyms=CXCR4-LO;

IsoId=P30991-2; Sequence=VSP_001890;

Note=Has been shown to exist_only in human so far;

Note=Has been shown to exist_only in human so far;

TISSUB SPECIFICITY: Expressed in numerous tissues, such as peripheral blood leukocytes, spleen, thymus, spinal cord, heart, placenta, lung, liver, skeletal muscle, kidney, pancreas, cerebellum, cerebral cortex and medulla (in microglia as well as in astrocytes), brain microyascular, coronary artery and umbilical cord endothelial cells. Isoform 1 is predominant in all tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: Integral membrane ALTERNATIVE PRODUCTS:

"Embryonic expression and function of the chemokine SDF-1 and its "receptor; CXCR4.";

Dev. Biol. 213:442-456(1999).

-I- FUNCTION: RECEPTOR FOR THE C-X-C CHEMOKINE SDF-1. TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL.

INVOLVED IN B-CELL LYMPHOPOIESIS, BONE-MARROW MYELOPOIESIS AND IN CARDIAC VENTRICULAR SEPTUM FORWATION. PLAYS ALSO AN ESSENTIAL ROLE IN VASCULARIZATION OF THE GASTROINTESTINAL TRACT, PROBABLY BY REGULATING VASCULAR BRANCHING AND/OR REMODELLING PROCESSES IN REGULATING VASCULAR BRANCHING AND/OR REMODELLING PROCESSES IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 suzuki G., Nakata Y., Uzawa A., Shirasawa T., Submitted (FEB-1997) to the EMBL/GenBank/DDBJ [7]

DEVELOPMENTAL STAGE: HIGH EXPRESSION DURING EMBRYONIC DEVELOPMENT DEVELOPMENT DEVELOPMENT COES NOT SEEM TO BE ASSOCIATED WITH THE DIFFERENTIATION OF ANY PARTICULAR CELL TYPE, BUT IS WIDELY UTILIZED WHEN THERE IS A REQUIREMENT FOR CELL MOVEMENT. FREQUENTLY ASSOCIATED WITH LESS IPPERRNTIATED CELL TYPES AND DOWN REGULATED WITH SUBSEQUENT DIFFERENTIATION. DETECTED IN SITES WITH HARMOPOIETIC POTENTIAL: THE YOLK SAC (7.5, 8.5 AND 12.5 DPC). BUTHER (12.5 DPC). DURING GASTRULATION, AT 7.2 TO 7.8 DPC, EXPRESSION IN THE MESODERM AND THE DEFINITIVE ENDODERM. AS GASTRULATION PATTERN PADES (8.5 DPC), EXPRESSION IN THE MESODERM IS DOWN-REGULATED, WHILE IT RECOMES PREDOMINANT IN NEURAL ECTODERM ENDODERMAL EXPRESSION IS RETAINED IN THE FOREGUT AND LATER IN A SUBSET OF FOREGUT DERIVATIVES, INCLUDING THE STOMACH (10.5 DPC), THE CYSTIC DUCTS OF THE GALLELADDER AND THE LUNG EPITHELIUM (12.5 DPC). IN NEURAL TISSUE: AT 10.5 AND 12.5 DPC, EXPRESSION MORE TIGHTLY CONFINED TO THE MENDAL EPITHELIUM LINING THE VENTRAL ROOT GANGLIA, IN THE VENTRAL EPITHELIUM LINING THE VENTRAL ROADS (RESTLUM). EXPRESSION THE DOVENDING THE DIFFCRED TO THE REGION WHERE THALAMUS AND HYPOTHALAMUS MEET.

DETECTED IN A DISCRETE BAND OF CELLS AT THE EMPOCRETING OF THE DIFFCRED TO THE REGION WHERE THALAMUS AND HYPOTHALAMUS MEET.

DETECTED IN A DISCRETE BAND OF CELLS AT THE ENDOTHELIUM OF NUMEROUS BLOOD VESSELS, BUT NOT ALL, AT 10.5, 11.5 AND 12.5 DPC, SICH BANDAUS AND HYPOTHALAMUS MEET.

DETECTED IN A DISCRETE BAND OF CELLS AT THE ENDOTHELIUM OF THE MENDAL FARMALY AND HYPOTHALAMUS MEET.

DETECTED IN A DISCRETE BAND OF CELLS AT THE ENDOTHELIUM OF THE MENDAL FARMALY SUFFICIENT OF THE CAPACITORY BULL AT 10.5, 11.5 AND 12.5 DPC, SICH BANDAUS AND HYPOTHALAMUS MEET.

DETECTED IN A DISCRETE BAND OF CELLS AT THE ENDOTHELIUM OF THE CAPACITAL WALL CAPILLARIES, FACIAL VESSELS, AND, AT 14.5 PDC, IN THE VASCULATURE OF THE OUTFLOW THE ARROWANDERS.

THE ARROWANDERS OF THE OUTFLOW THE ARROWANDERS OF THE OUTFLOW THE ARROWANDERS OF THE OUTFLOW THE ARROWANDERS.
